## **Universal Disc Player**

### **RS-232C Control Specification**

**Notes:**

When "Power Saving" mode is set to "Power Saving Stanby", the BD Player denies the command from RS-232C. It means the BD Player does not turn on via RS-232C control. Please set "Power Saving = Normal Standby" for the power on/off control via RS-232C. Please refer to "Power Saving" setup part in User Guide page.37 for the detail.

## Serial communication interface

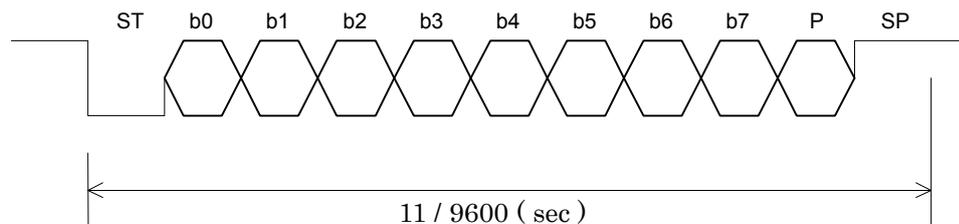

### 1-1. Physical interface

#### Arrangement of connector signals

Pin #	RS-232C	
	Signal	I/O
1	GND	-
2	TxD	O
3	RxD	I
4	NC	-
5	S.GROUND	-
6	NC	-
7	NC	-
8	NC	-
9	NC	-

### 1-2. Transfer format of serial data

- Interface : As per RS-232C or RS-422A
- Communication system : Half-duplex communication
- Data transfer mode : Start stop synchronization
- Transfer rate : 9,600bps
- Start bit ( ST ) : 1 bit
- Data bit ( b0-b7 ) : 8 bits
- Parity ( P ) : Even number
- Stop bit ( SP ) : 1 bit
- Transfer data : ASCII Code (Hex Code)
- Control characters : STX (02h)  
ETX (03h)  
NAK (15h)

### 1-3. Command format and answer format

This unit shall be based on commands each of which consists of a data row ( some commands are without a PC ) composed of command codes ( CC ) and parameter codes ( PC ) . The transmitting station shall be designed to send block check characters ( BCC ) following ETX, with the data row enclosed in STX ( text start : 02h ) and ETX ( text termination : 03h ) . The receiving station shall regard receipt of BCC as the completion of command reception when it has received STX.

Here are the formats.

Commands : <STX> <CC> <PC0> <PC1> <PC2> <-----> <PCn> <ETX> <BCCH> <BCCL>

STX (Start of TeXt) : 02h

CC (Command Code) : Command code

PC (Parameter Code) : Defined for each command  
( Contents and number of parameters )

ETX (End of TeXt) : 03h

BCC (Block Check Character) :

$CC + PC0 + PC1 + PC2 + \dots + PCn + ETX = XYh$

(Each of X and Y is 4 bit long) X, Y=0,1,2,3,4,5,6,7,8,9,A,B,C,D,E,F

BCCH ( high-level byte ) = X as converted to an ASCII code

BCCL ( low-level byte ) = Y as converted to an ASCII code

Answers : <STX> <RC> <AC> <PC0> <PC1> <PC2> <-----> <PCn> <ETX> <BCCH> <BCCL>

STX (Start of TeXt) : 02h

RC (Reply Code) : Reply code (=Command code)

AC (Answer Code) : Answer code

PC (Parameter Code) : Defined for each command  
( contents and number of parameters )

ETX (End of TeXt) : 03h

BCC (Block Check Character) :

$RC + AC + PC0 + PC1 + PC2 + \dots + PCn + ETX = XYh$

(Each of X and Y is 4 bit long) X, Y=0,1,2,3,4,5,6,7,8,9,A,B,C,D,E,F

BCCH ( high-level byte ) = X as converted to an ASCII code

BCCL ( low-level byte ) = Y as converted to an ASCII code

#### 1-4. Protocol for data transmission and reception

This unit is based on half-duplex communication. The unit shall therefore transmit commands and receive answers according to the following procedure.

##### 1-4-1. Basic procedure

- 1) The host shall select commands for this unit and transmit them to this unit. Command interval time is MIN 40 $\mu$ sec.
- 2) Having issued a command, the host shall receive an answer from this unit, then issue the next command.
- 3) The host shall analyze the RC, AC, and PC as answers given and decide whether the command has been normally executed.
- 4) The host shall give an answer to a command that gives operational instructions, then issue a status request command, and decide whether this unit has finished operating with regard to the command that gives operational instructions.
- 5) The time from the start of command transmission to the end of command transmission should be max 40 msec.
- 6) The time from the completion of command transmission to the start of answer-back is MAX. 5 sec.
- 7) This unit cannot receive any commands for about 5 seconds after the power switch is turned on.

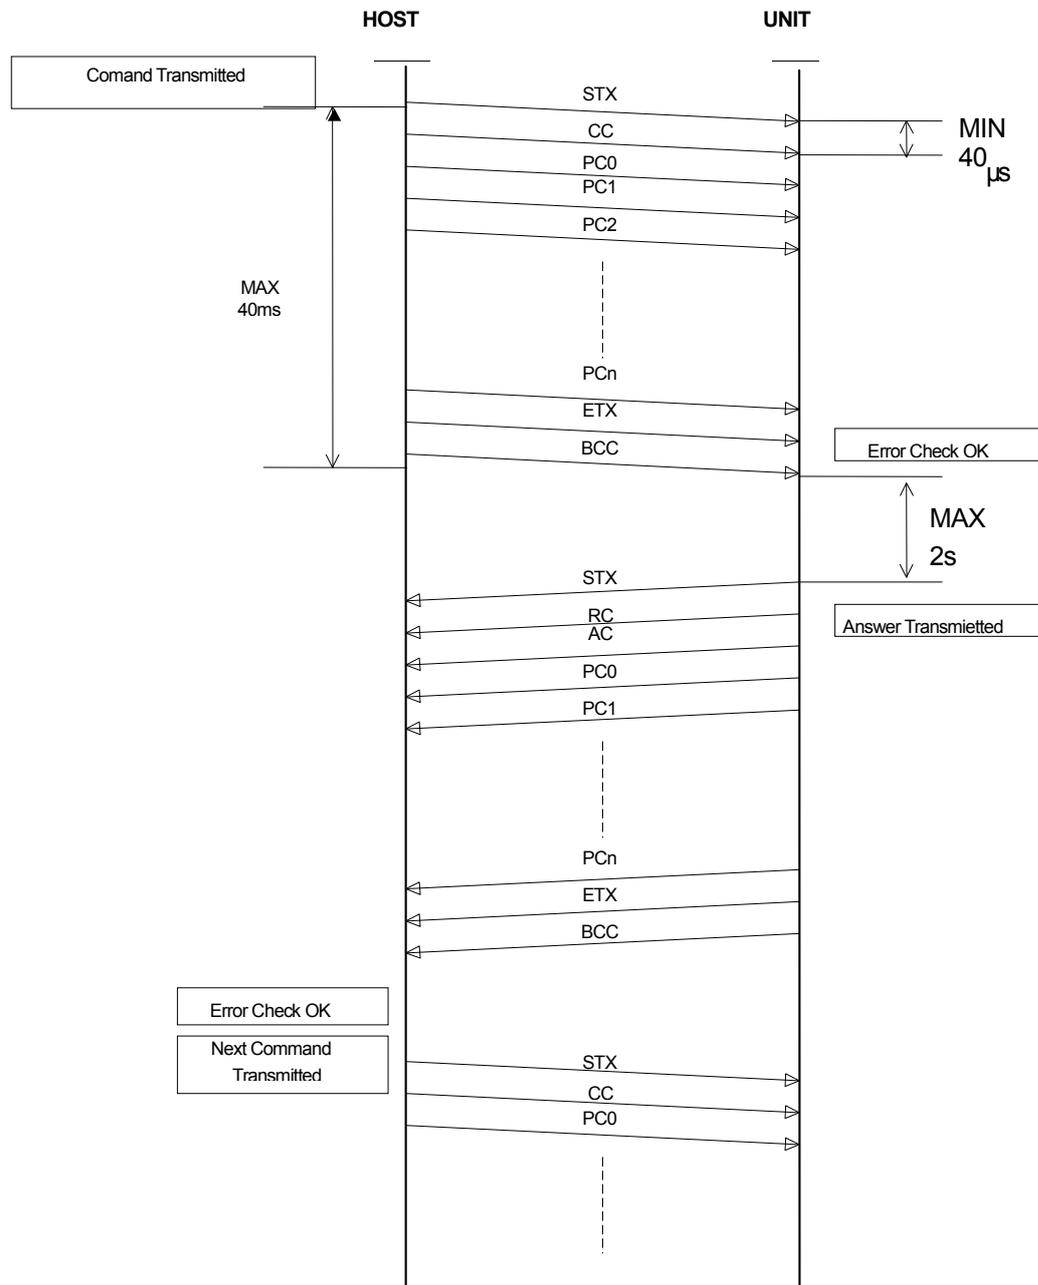

##### 1-4-2. Communication errors

- 1) Having received a command, which results in a communication error ( overrun, framing, or parity error ), this unit shall give NAK ( 15h ) . ( MAX 80ms from the start of command transmission )
- 2) If the host has received NAK from this unit, it shall retransmit the command that it has transmitted immediately beforehand.
- 3) Having received an answer, which results in a communication error (overrun, framing, or parity error), the host shall respond with NAK.
- 4) If it has received NAK from the host, this unit shall retransmit the answer it has transmitted immediately beforehand. (MAX 40ms)
- 5) When there is no answer from the unit within 6s, the host shall retransmit the command.

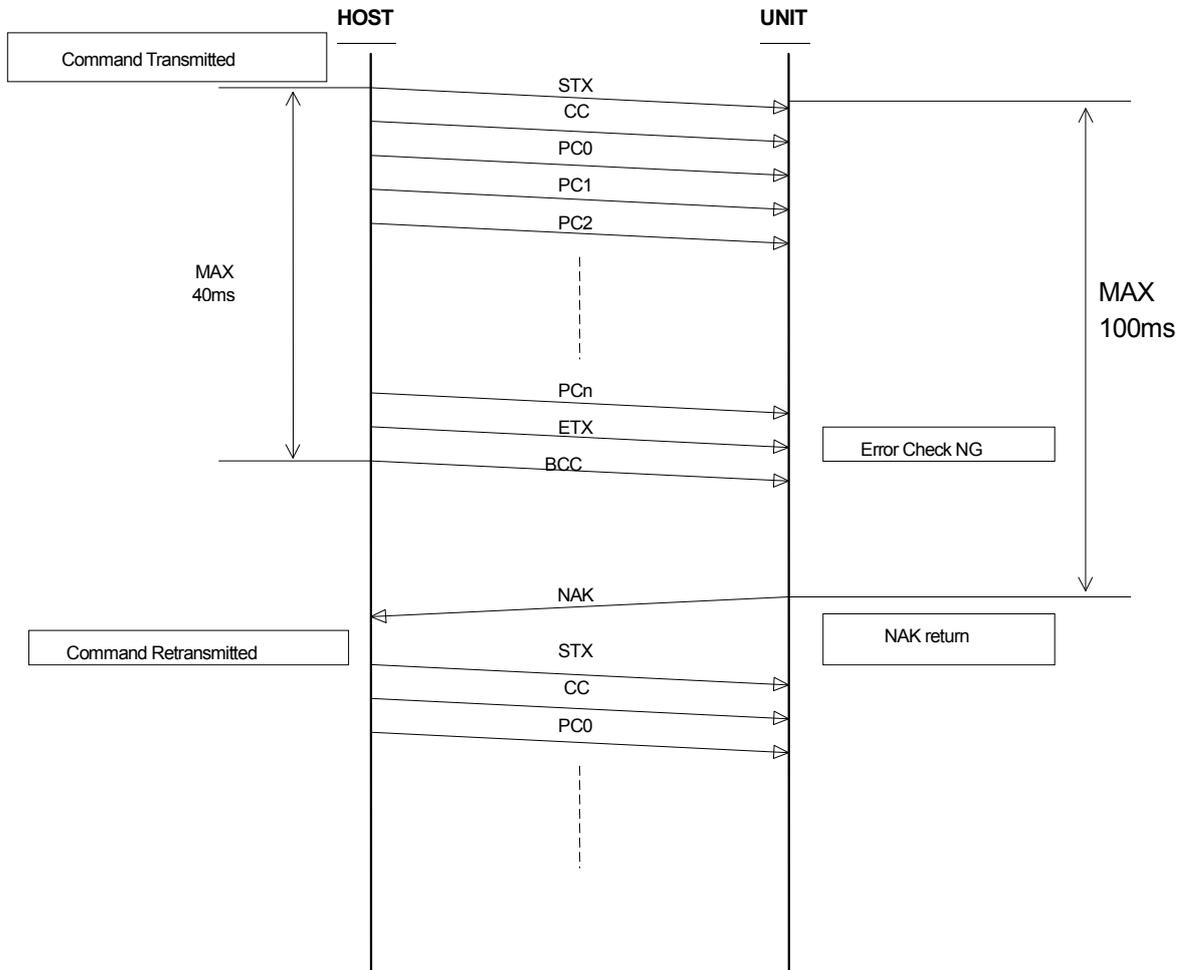

### 1-5. Command / Answer sequence

Shown below are the command sequence and the answer sequence of this unit.

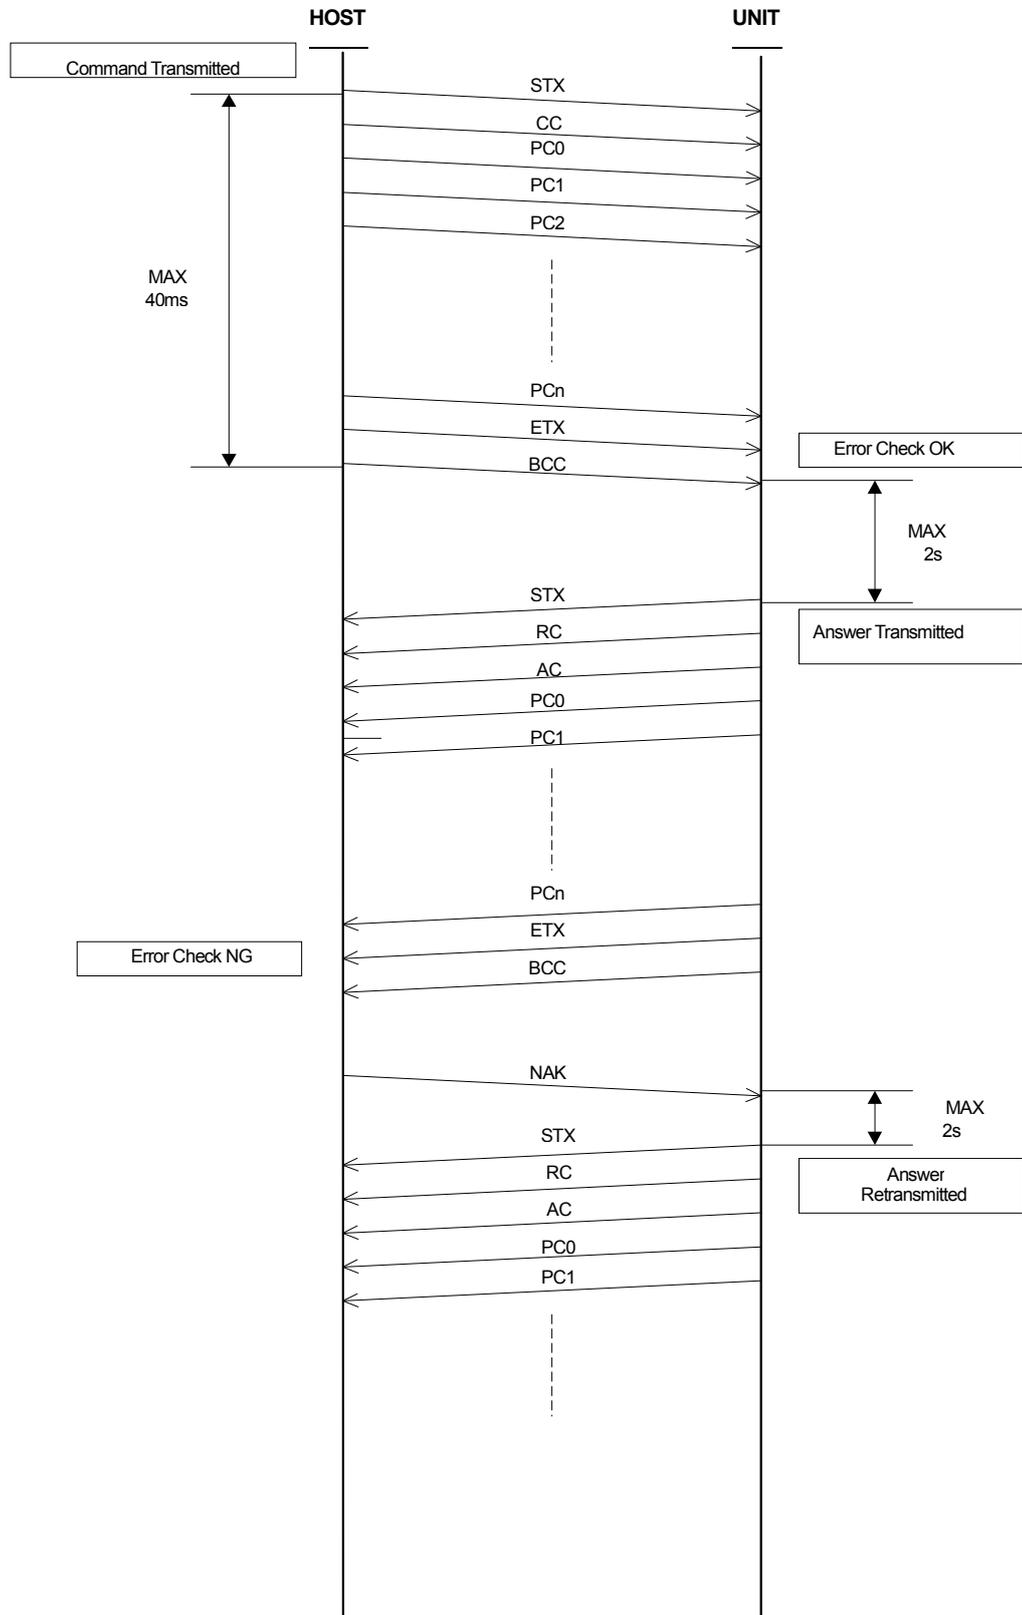

- 1) When a command is normally received (unit) and an answer is normally received (host) with an answer parameter

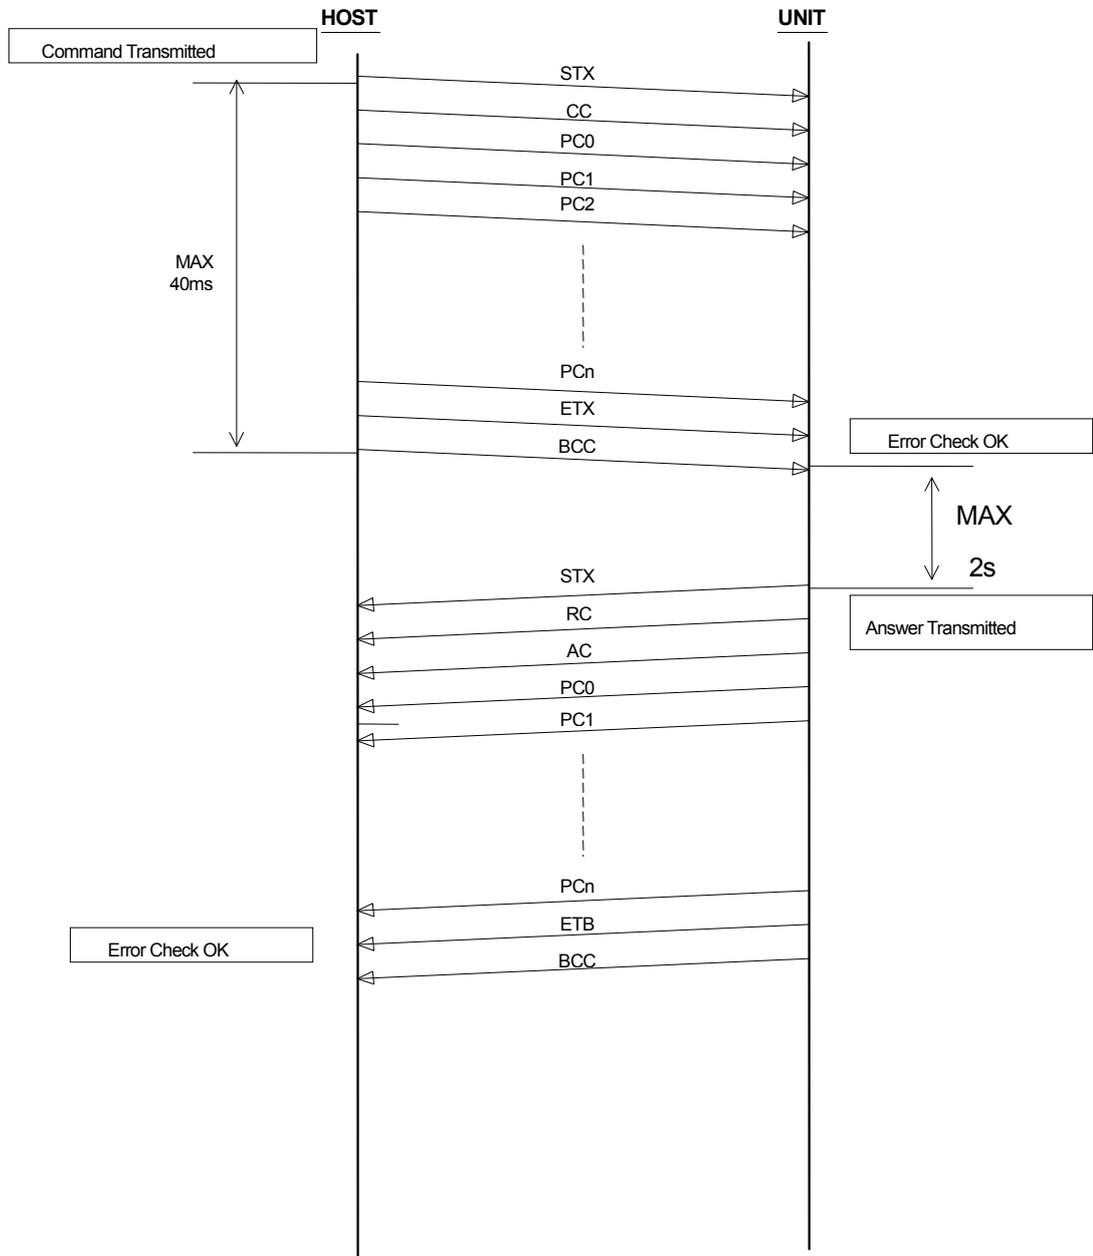

2) When a command is abnormally received ( with or without an answer parameter )

- 3) When a command with an answer parameter is normally received ( unit ) and an answer is abnormally received ( host )

- 4) When a command with an answer parameter is normally received ( unit ) and an answer is normally received with ETB ( host )

## 1-6. Classification of control codes

2Xh : for POWER control

3Xh : Command related to the acquisition of player information (like as status)

4Xh~5Xh: Basic operation command

61h~7Xh : Enhanced operation command

## 1-7. Control Code List

[Please refer the attached code list \(Marantz RS-232C Command List-UD BD All.xls\) for the details.](#)

**1-8. List of answer codes**

No.	Status	Code (ASCII)	Description
1	Command OK	20h (SP)	Accepts the command.
2	Invalid	30h (0)	Invalid command.

**1-9. List of status codes**

Here is a list of answer code types.

3Xh : Status of the entire system

4Xh : Status of each action mode

No.	Status	Code (ASCII)	Description
1	Stand-by	30h (0)	Stand-by
2	Disc Loading	31h (1)	Under disc loading.
3	Tray Opening	33h (3)	Disc tray open.
4	Tray Closing	34h (4)	Disc tray close.
5	No Disc	41h (A)	Disc not present
6	Stop	42h (B)	Stop
7	Play	43h (C)	Under disc playing.
8	Pause	44h (D)	Playback in process.
9	Scan Play	45h (E)	Scanning in process.
10	Slow Search Play	46h (F)	Slow scanning in process.
11	Setup	47h (G)	Setup mode
12	Resume Stop	49h (I)	Resume stop condition
13	Menu	4Ah (J)	Menu playback in process
14	Home Menu	4Bh (K)	Home Menu mode

**1-10. For reference: A detail of each command structure**

- When this unit is set to be compatible with all commands and fails to accept a command (due to a communication error, for example), it returns NAK ( 15h ) as an answer.

**1-10-1. Power ON**

This command requests “Power on”(turn on the unit) from “Standby”.  
Same as the “POWER ON” button of Remote Controller

## 2) Special conditions

- This command is valid only, when mode status data is Play (E) or Pause (F) .
- The unit can skip to a maximum track with Forward (+) and to a minimum track with Reverse (-) and when it goes to more than those track, the Order Track None (2) answer code is issued.

**1-10-7. Slow /Search**

These commands request a search mode (Fast forward, Slow etc.)

47h (G)	NORMAL

## 2) Special conditions

- This command is valid only when the mode status is Play (E) or Pause (F).
- To make the search speed what you want, it needs to send some this command.  
Example: Now it's playing. If you make the search speed to FF X 6, it needs to send this command 3 times.  
Refer to next page for the operation matrix chart.
